Data Analyst / Business Analyst

ASHRAF UDDIN TAFADAR

+44 07923879734 | ashrafnadir1994@outlook.com
https://www.linkedin.com/in/ashraf-uddin-tafadar-5116a8167/
Walton-on-Thames, KT12 1FY

Skills

Python
pandas, Scikit-learn, NumPy, beutifulsoup2

R Programming
dplyr, shinny, ggplot, tm, tidyr

Excel
Pivot Table, Pivot Chart, VLOOKUP, HLOOKUP, VBA

Power Bi
DAX, API, Power Query

SQL
MS SQL Server Studio, MySQL

Tableau
LOD Expressions, Tableau Prep

Projects

DATA ANALYSIS – PAYMENT METHODS VS DWELL TIME (REAL DATA) – Final Year Project April 2024

- Utilized **Python, Excel** to analyze Route 7 bus operations for a renowned bus service company using three datasets covering June 4th to June 10th, 2023. The data was preprocessed through steps including **renaming columns**, **dropping irrelevant columns**, **handling null values**, **proportional imputation**, and **type conversion** ensuring 100% data consistency and accuracy for analysis.
- **Identified and resolved data inconsistencies** across datasets, leading to a 95% reduction in data errors.
- **Provided key insights:** George Street (Stop J) had the most dwell time at 247,966 seconds (≈ 68 hours), Brighton Marina experienced the highest customer frequency with 8,391 passengers, and the busiest time of the day was 23-06-07 at 3 PM, with 1,197 passengers, highlighting peak operational periods, etc.
- **Cross-validated** and developed a predictive regression model with an **R-squared (R^2) of 69%**, compared the **feature importance** of payment methods (Cash, TOTO, Mobile App, and Keycard) on dwell times, revealing that digital payment methods (TOTO, Mobile app and Keycard) significantly reduced dwell times, while cash transactions were the slowest, contributing to operational delays. Specifically, **TOTO** was **29.6% faster** than cash, **10.9% faster** than keycard, and **8.5% faster** than mobile app, making it the most efficient payment method in terms of dwell time.

DATA MANAGEMENT– SEMBR-WTT ELECTRIC BIKE RENTAL SYSTEM – Master's Project February 2024

- Developed a relational database system with **Microsoft SQL Server Management Studio** for SEMBR, integrated with WTT's booking system for seamless customer experiences. Transformed and filtered data by using aggregating and filtering function to improve reporting process.
- Created and optimized **SQL** queries for tracking bike inventory, booking revenue, and generating operational reports.
- Enhanced data integrity and minimized booking conflicts, contributing to improved customer satisfaction.

DATA VISUALIZATION – PLANT COMPANY SALES DASHBOARD – Personal Project August 2023

- Designed and developed an interactive **Power BI** dashboard using **Power Query** and **DAX** to analyze key business metrics (Gross Profit, Sales, and Quantity), incorporating dynamic filters and slicers for Year-To-Date (YTD) and Prior Year-To-Date (PYTD) performance comparisons across dimensions such as country, product, and account.
- Integrated advanced Power BI features like drill-through, measures, and calculated columns to create a "Bottom 10 YTD vs PYTD | Country" section, identifying underperforming regions and accounts, and providing actionable insights for data-driven strategies to improve performance.

DATA ANALYSIS – EPL 2019/20 SEASON LOCKDOWN GAMES – Master's Project April 2024

- Conducted an in-depth **R** statistical analysis of EPL 2019/20 season data, focusing on the effects of the COVID-19 lockdown on match outcomes and team performances.
- Designed and implemented interactive visualizations with Shiny to analyze and compare pre- and post-lockdown trends in player performances and team dynamics.
- Utilized advanced R techniques (`**dplyr**`, `**ggplot2**`, `**shiny**`) for data preprocessing, statistical modeling, and visualization, producing actionable insights into gameplay during unique circumstances.

DATA VISUALIZATION – BRITISH AIRWAYS CUSTOMER REVIEWS DASHBOARD – Personal Project August 2024

- Designed and developed an interactive **Tableau** dashboard to analyze British Airways customer reviews, focusing on metrics such as overall satisfaction, cabin staff service, and value for money to create visualizations, including maps, line graphs, and bar charts, etc.
- Implemented dynamic filters (e.g., traveler type, seat type, aircraft model) to enable users to uncover hidden insights and explore trends across multiple dimensions such as geography, time, and customer preferences, aircraft models.

DATA VISUALIZATION – COFFEE SALES DASHBOARD – Personal Project November 2023

- Developed a dynamic sales dashboard with **Excel** by integrating preprocessed and cleansed data from three relational tables (Products, Customers, and Orders) to provide actionable insights into coffee sales performance.
- Designed and implemented visualizations for tracking top 5 customers, country-level sales distribution, and total sales trends over time.

Education

MASTERS IN DATA ANALYTICS – University of Brighton – Brighton, UK August 2024
Majors: Data Management, Statistical Data Analysis with R, Medical Statistics, Business Analytics Strategy and Practice, etc.

BSC IN COMPUTER SCIENCE – Shahjalal University of Science & Technology – Sylhet, Bangladesh April 2018
Majors: Data Structures and Algorithms, Database Systems, Artificial Intelligence, Data Mining and Data Warehousing, etc.
